

APPLE GRADING MACHINE

The machine adopts balance and lever principle. Apples are fed into Feed Spout ; after passing through the soft nylon brushes and natural horse hair brushes (for polishing). Now cleaned and shiny apples go to belt grader and are collected in six different sizes on packing table.

Key features of Apple Grading Machine

- Standard housing type ball bearing (SKF, NRB, NTN, DODGE) (Low maintenance)
- Standard spkocket TLB type (SKF) (Low maintenance with high self life)
- Sturdy structure (4.5 mm thickness, TATA, JINDAL, JSW, make square pipe) with high quality glossy silver paint
- Galvanized sheet metal (3mm thickness, 2.7 gsm) high strength & rust proof protection
- Soft nylon brushes and natural horse hair roller for better dust removing & polishing
- CE Mark electrical items like motor, MCR to sustain voltage fluctuation
- New generation electric control panel with variable speed drives
- Size Adjustable arrangement provided to achieve required sizea
- High Strength, soft rubber pad coating on all spouts and chutes
- Spring loaded rubber padded collection box (6 Nos.)
- Height adjustment available in dry brusher
- Best quality PVC belt with bottom track
